The Cap Clip®

The Cap Clip® is an innovative, much appreciated accessory for the PT Cruiser. Many have found that the plastic tether that comes factory installed on their gas cap is in fact a large annoyance. Unscrewing the gas cap with this tether in place can be difficult, especially if your hands are large or on the weak side. Once you do get the gas cap unscrewed, the tether introduces an even larger annoyance with the gas cap swinging and scraping against the PT's paint job! Removing the tether altogether will present the problem of where to put the gas cap while filling the tank. The PT certainly has no flat surface to set the cap (not that a person would want to do that!), and many a gas cap has been left behind, sitting on the gas pumps and forgotten as the driver leaves the gas station.

Enter the Cap Clip®. Made of durable PVC plastic, the Cap Clip® installs in seconds with no tools, safely and securely locks the gas cap in place, remains almost invisible, is available in black or white to blend with the PT's paint and is made with attention to detail so as not to degrade the look of your PT Cruiser!

Installing the Cap Clip®

1. Locate the Cap Clip® with the 'orange-peel' textured side toward you. Note the 2 large vertical surfaces, and the thin horizontal center with a notch on each side, that together combine to roughly make an "S" shape. The top of the clip is the large vertical portion with the rounded corners and the indented 'dimple'. See figure 1.
2. Open your gas fill door and note the brace with the 'V' shaped indents on the door's inside surface. With the top of the Cap Clip® up and the textured surface facing you, insert the bottom of the clip into the top 'V' and behind the metal bracing. Push down hard until the notches cut into either side of the clip's center section lock into place in the 'V's bottom. See figure 2.

Your Cap Clip® is now properly installed. Please continue on to the back side to learn the easiest way to clip on your cap!

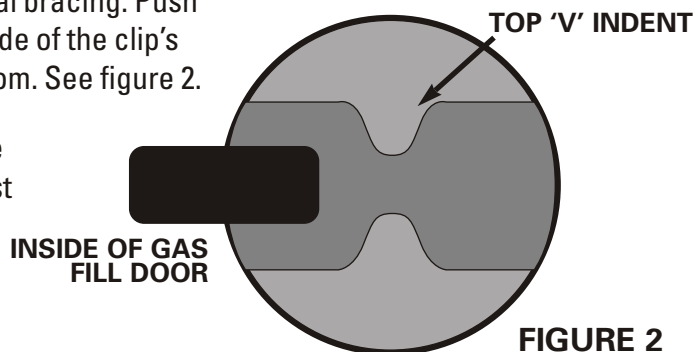

FIGURE 2

The Cap Clip® is a safe, sure and trouble-free way of securing your gas cap while filling your tank.

- Made of durable PVC plastic, chemical resistant.
- Installs in seconds with NO tools.
- Available in black or white.
- Gas cap safely stays in place *without* its tether.
- Installs on fuel door, nearly invisible.

NO MORE:

- Struggling with unscrewing the cap with that annoying tether attached.
- Looking for a flat surface to place your cap while filling.
- Driving away with your cap on top of the gas pumps.
- Worry of gas on your paint.
- Worry of scratching your paint.

Perfect for locking gas caps that have no tether!

The Cap Clip®

Seating your gas cap on the Cap Clip®

1. In order for your gas cap to lock onto the Cap Clip® the gas cap must be aligned either parallel or at a 90° angle to the fuel door. Use the gas cap's 'handle' to determine the correct alignment. See figure 3.

If you'll notice the under-side of the gas cap you will see notches on the inside black throat and a rubber gasket. The Cap Clip® locks itself between these notches and snug against the rubber gasket.

2. Holding your gas cap at a slight angle to the Cap Clip® and fuel door **roll** the gas cap onto the Cap Clip®. You **cannot** simply push the gas cap straight down onto the Cap Clip®, doing so will not allow the clip to lock on to the notches of the gas cap. See figure 4.

3. Roll the gas cap onto the Cap Clip® and *then* you can push down on the gas cap and slightly towards the fuel door to lock in place. See figure 5.

4. Figure 6 shows a gas cap securely held in place by the Cap Clip®.
